QuantumFuture's Software Evaluation Program

Objective

QuantumFuture is a company specializing in computational chemistry and computational drug discovery solutions. Our DFT program offers unmatched computational speed compared to traditional all-electron Gaussian basis set ab initio calculations. This results in significant savings in computational resources, energy, and costs. However, we understand that the process of evaluating new software, conducting benchmark tests, and recommending its adoption to employers can be time-consuming and burdensome for busy scientists. Therefore, we have developed the QuantumFuture Software Evaluation Program to streamline this process and make it more accessible.

Program Details

Under this program, any research scientist who invests sufficient time and effort into evaluating our software can earn up to a 20% discount on QuantumFuture licenses. Half of this discount (10%) can be immediately redeemed by the employer upon the subsequent purchase of licenses and will remain valid for 12 months from the date we receive the evaluation results. This discount offers significant benefits to employers, as our software not only provides the licensing discount but also helps save substantial computational resources, energy, and costs.

The other half of the discount will be recorded for the scientist. To receive the discount, the scientist needs to provide a summary of the evaluation results, excluding any non-public

intellectual property, to us. If we deem the evaluation study to be sufficiently thorough, we may request consent to utilize a portion or all of the results for our advertisement purposes. In return, we will award the author a 10% discount on QuantumFuture licensing. It is important to note that regardless of whether the evaluation study leads to a new license purchase, the 10% reward will still be granted to the scientist. We highly value the quality of scientific efforts and recognize their contribution.

The personal 10% discount on QuantumFuture licensing earned through this program can be redeemed at any time without an expiration date. The scientist can utilize it when establishing their own scientific software company, joining another organization, university, or research laboratory. In addition, if we receive a sufficiently thorough evaluation document of our software, we will recognize the author as an expert in working with QuantumFuture software to some degree. This recognition is solely based on the quality of the scientific evaluation presented to us and is irrespective of whether the effort leads to a QuantumFuture license purchase or not. This recognition can be significant as QuantumFuture does not follow traditional hiring methods involving recommendation letters, CVs, and short interviews. Instead, we exclusively hire associates from a pool of expert scientists and software developers who have demonstrated experience and success in applying or developing our software through an extensive period of collaboration with us.

At QuantumFuture, we aim to facilitate the evaluation and adoption of our software by reducing the barriers and recognizing the efforts of research scientists. We believe that this program will not only benefit the scientific community but also contribute to advancements in computational chemistry and drug discovery.

Sincerely,

Laszlo Fusti-Molnar
